Getting Started in IT
Virtualization - Lesson 2.1
Instructions - Downloading a Prebuilt VM

After you complete the guided simulation, perform the steps on your own computer:

Prerequisites
Before completing this activity on your personal computer, verify that you meet the following prerequisites:

- A web browser, such as Google Chrome, Microsoft Edge, or Mozilla Firefox, is installed on your computer.
- You are connected to the internet.
- The free file archiver 7-zip is installed: https://www.7-zip.org/a/7z1900-x64.exe

1. Double-click the **Google Chrome** shortcut on the desktop.
2. In Google Chrome, enter *https://www.osboxes.org/ubuntu-server/#ubuntu-server-20-04-vmware* in the address bar.
3. Press Enter.
4. Under Ubuntu Server 20.**04** Focal Fossa, ensure that the **VMware** tab is selected and click the Download button.
5. After the file is downloaded, click the up arrow next to the filename in the download bar.
6. Select **Show in folder**.
7. Right-click **Ubnt_Svr-20.04-VM-64bit.7z**.
8. Select **7-Zip**.
9. Select **Extract files.**
10. Leave the default Extract options in 7-Zip and click **OK**.
11. After the file is extracted, click the **Ubnt_Svr-20.04-VM-64bit** folder.
12. Click the **64bit** folder to open it.
    - The Ubuntu Server 20.04 (64bit).vmdk file defines this VM. You import this file into Workstation later. For now, minimize or close File Explorer and minimize or close Google Chrome.
